Introduction

We can do basic arithmetic very easily in R. Let's start with addition.

Addition

You can use R as a calculator to do addition, using `+` the same way you would on a standard calculator.

```
4+4
```

```
## [1] 8
```

```
8+9
```

```
## [1] 17
```

Subtraction

The same goes for subtraction, but with the `-` symbol.

```
10-8
```

```
## [1] 2
```

```
9-6
```

```
## [1] 3
```

Multiplication

And multiplication, with `*`.

```
5*3
```

```
## [1] 15
```

```
4*2
```

```
## [1] 8
```

Division

Lastly, division uses the / symbol.

```
9/3
```

```
## [1] 3
```

```
40/6
```

```
## [1] 6.666667
```

Conclusion

Arithmetic is simple, easy, and convenient in R.
